

STAR-PLUG 3/8"

STAR-PLUG 3/8" is pure, naturally occurring sodium bentonite, which is mined and processed in Wyoming. STAR-PLUG 3/8" has the unique ability to absorb 7-10 times its weight in water making it an economical method for many sealing and plugging applications.

Application

STAR-PLUG 3/8" has many uses including the sealing of casing and lost circulation control in mud used in rotary or coring operations

Advantages

- Prevents entry of surface water into wells
- Forms a flexible, permanent seal downhole
- Allows re-entry, if required
- Easy to apply and more cost effective than coated pellets
- Biodegradable and environmentally friendly
- Compatible in saltwater systems

Typical Usages

Typical Amounts of STAR-PLUG 3/8"

STAR-PLUG 3/8" can be added dry to the borehole or can be blended with water or light polymer slurry and applied.

Properties

Physical Appearance	Beige to grey granules
Specific Gravity	2.5 - 2.6
Moisture	12%
Bulk Density	68 lb/ft ³ (1,025 kg/m ³)
Sizing	3/8"- 1/4"

Packaging

STAR-PLUG 3/8" is packaged in 50-lb (22.7kg) multi-wall bags at 60 per pallet

*NOTE: Store in a dry location
